

Hoval

Responsibility for energy and environment

Thinking the future.
With Hoval.

We look forward to meeting you at MCE 2010, Expocomfort Expo
and Convention.
Milano 23-27 March 2010, Hall 7 Stand S31 T39.

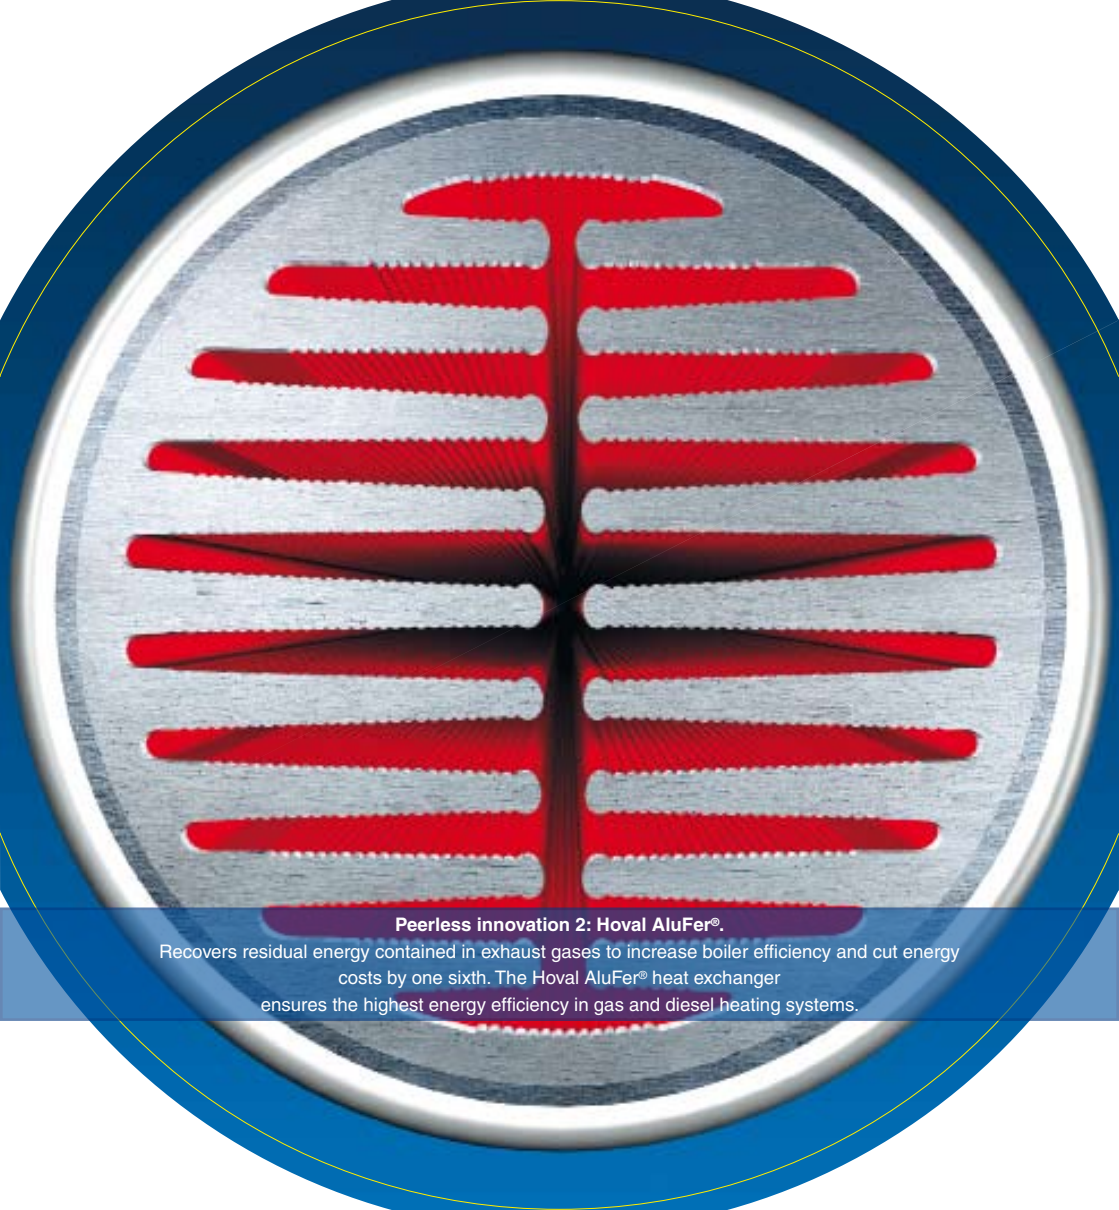

Have you already thought about the most efficient solution for making a Class A building?

Today's centralised heating systems - with autonomous management and combined use of several energy sources - are the new frontier of flexibility. Hoval applies the best technology, skills and experience to reach the highest energy efficiency standards: with Hoval systems and appropriate construction, obtaining Class A ClimateHouse certification in a building is easy.

Furthermore, matchless energy saving and comfort performance is obtained by using the Hoval HomeVent® home ventilation system.

* Watch the video and discover the central heating solution that Hoval has engineered for the new homes in L'Aquila.

Peerless innovation 2: Hoval AluFer®.

Recovers residual energy contained in exhaust gases to increase boiler efficiency and cut energy costs by one sixth. The Hoval AluFer® heat exchanger ensures the highest energy efficiency in gas and diesel heating systems.

Have you already thought about how to cut electricity consumptions?

Containing electricity consumption in addition to saving fuel cost is essential to obtain major savings.

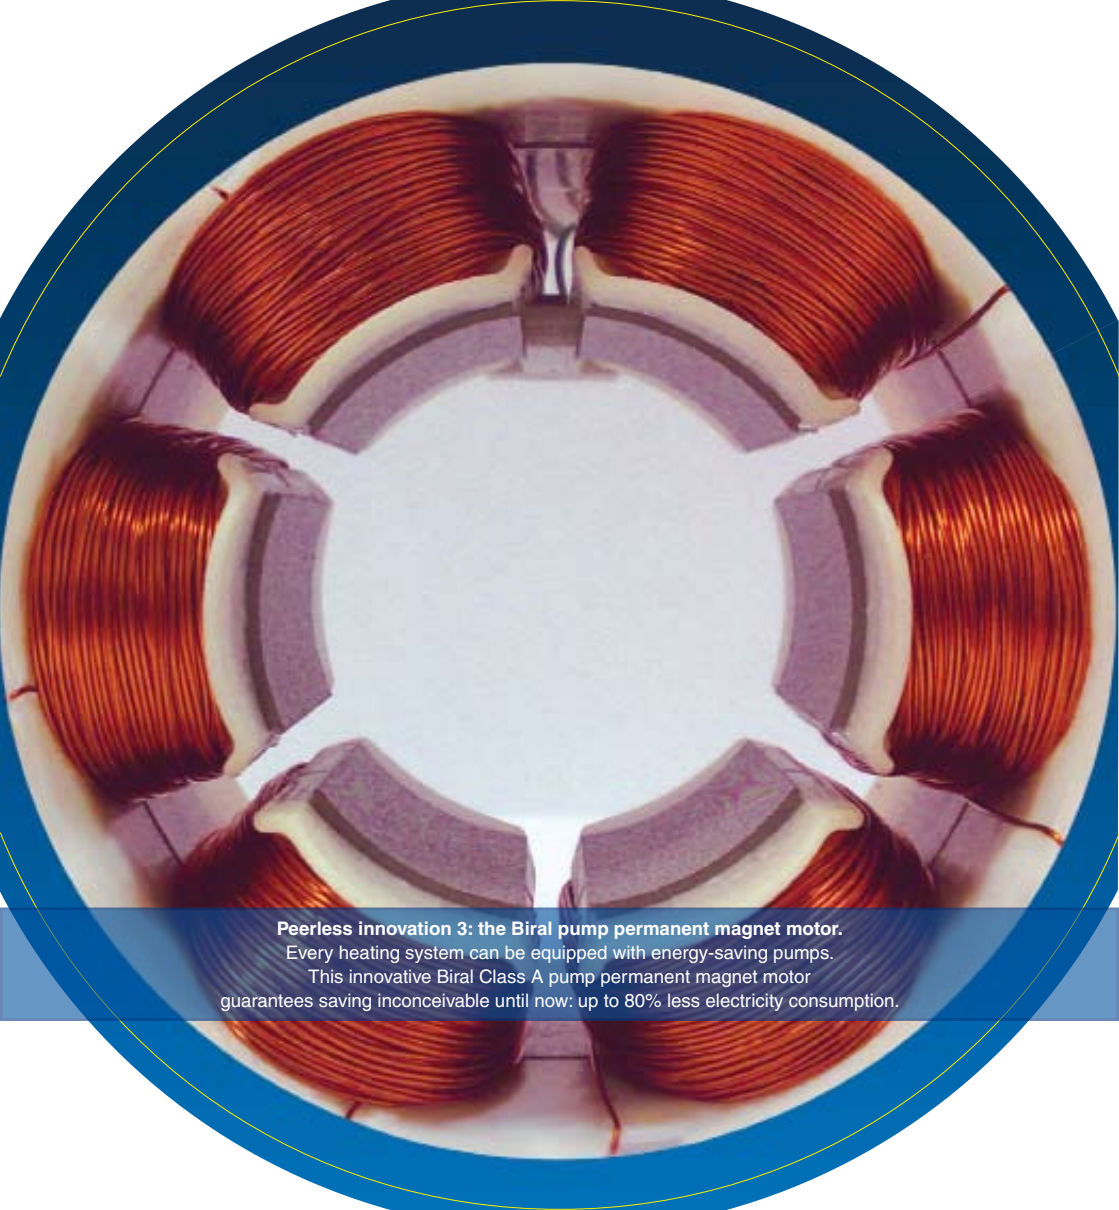

The high water content in Hoval floor-standing condensation boilers alone means that the primary circuit pump can be eliminated. And low absorption fans allow outstanding electricity savings.

The difference is remarkable when an old hot water recirculation pump is replaced by the best of Biral technology: pumps with high-efficiency permanent magnet motor with logical function that recognises the use needs. Top-class comfort can be reached by saving up to 80% of electricity.

The prodigious permanent electromagnet of the
Biral Class A pumps.

Peerless innovation 3: the Biral pump permanent magnet motor.

Every heating system can be equipped with energy-saving pumps.

This innovative Biral Class A pump permanent magnet motor guarantees saving inconceivable until now: up to 80% less electricity consumption.

Win a trip for two on the red Bernina train that climbs the Alps.

It has been dubbed "the world's most scenic railway" by many, also because travellers on the incredible little red train feel that they can nearly touch the sky. Stepping aboard the Bernina train is akin to stepping onto a stage where nature and daring engineering perform: very narrow bends make you feel as if you can touch the end of the train, bridges, helical tunnels and sometimes head-spinning gradients. Unquestionably, the charm of the railway is also the route: from the Valtellina valley floor through the Val Poschiavo woods, it winds up to the glaciers and the peaks of Bernina, and the back down through the charming Engadina, to Pontresina and Saint Moritz.

Fill in this coupon, tear it off and post it at the Hoval stand: Hall 7 Stand S31 T39.

Company:

Good luck!

Now it's time to think about yourself.
Take part in our competition and
if you are lucky you can win a trip out
in the open air across the marvellous peaks
of the Alps.

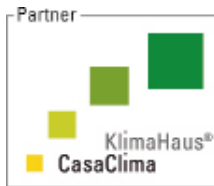

How to reach us at the Expo Hoval is in Hall 7 Stand S31 T39

Hoval

Responsibility for energy and environment

New Milano Rho Expo Centre

S.S. del Sempione 28, 20017 Rho (Milan), Italy

By underground:

- Red line 1 (end of line Rho-Fiera Milano)

By car:

- From the A7 (Genova) and A1 (Bologna) motorways: Tangenziale Ovest direction Nord follow indications to Fiera Milano
- A4 (Torino -Venezia) motorway: Pero-Fiera Milano exit
- A8-A9 motorways (direction Milano): from Milano Nord, follow directions to A4 Venezia, Fiera Milano exit

By train:

- Centrale and Garibaldi railways stations: underground green line (direction Abbiategrosso / Cadorna -Triennale stop), take red line direction Rho-Fiera Milano
- Stazione Cadorna (Ferrovie Nord): take red line (direction Rho-Fiera Milano)
- Rho railway station: shuttle bus service run from Rho railway station to expo centre
Service timetable: from 6:20 a.m to 8:15 p.m.
from Mondays to Saturdays.
